### 3 Models

#### (1) Pillow Block Units)

##### 6 Light Pillow Block Units

BLP

ALP

**BLP** is a compact and lightweight pillow block unit which is ideal for limited space applications and light to moderate duty applications.

**ALP** with SA eccentric locking collar style is also available.

Duty: Light

UP

UP-C, CD

**UP** is a light duty pillow block unit that is part of the Clean Series. It has a zinc-alloy housing for a high level of corrosion resistance and it is capable of accepting end covers to increase contamination resistance.

Duty: Light

##### 8 Corrosion Resistant Series Pillow Block Units

UCSP-H1S6

USP-S6

**UCSP** is a pillow block unit that is made entirely out of stainless steel components for the highest level of corrosion resistance for a mounted bearing unit. It is also pre-filled with food grade grease for food processing applications.

Duty: Standard

UCSPA-H1S6

UCVP-S6  
UCVP-ES7

**USP-S6** is a light duty stainless pillow block unit that is part of the Clean Series. It has a stainless housing for a high level of corrosion resistance and it is capable of accepting end covers to increase contamination resistance.

Duty: Light

**UCSPA** is a tapped-base pillow block unit with threaded bolt holes in the bottom of the housings. It is made entirely out of stainless steel components for the highest level of corrosion resistance for a mounted bearing unit. It is ideal for exact unit positioning and limited space applications. It is also pre-filled with food grade grease for food processing applications.

Duty: Standard

UCVPAN-ES7

**UCVP** and **UCVPAN** is a pillow block unit with a corrosion resistant thermoplastic housing and the option of either a stainless steel bearing insert or a zinc chromate plated bearing insert. Both bearing inserts offer a high level of corrosion resistance and they are factory lubricated with food grade grease.

Duty: Standard

##### 9 Stamped Steel Pillow Block Units

SBPP

SAPP

**SBPP** is a pillow block unit with a lightweight and compact stamped steel housing for light to moderate duty applications. **SAPP** with SA eccentric locking collar style is also available.

Duty: Light

**5 Light 3-Bolt Flange Units**

SBTFD-H4RKP8

SATFD-FH4P9

**SATFD** is a compact and lightweight three-bolt flange unit with square bolt holes for carriage bolts and a ductile iron housing for added strength. It is ideal for limited space applications and light to moderate duty applications.

with ductile iron housing

Duty: Light

**6 Light 2-Bolt Flange Units**

BLF

ALF

**BLF** is a compact and lightweight two-bolt flange unit which is ideal for limited space applications and light to moderate duty applications.

**ALF** with SA eccentric locking collar style is also available.

Duty: Light

**7 Compact 2-Bolt Flange Units**

UFL

UFL-C, D

**UFL** is a light duty two-bolt flange unit that is part of the Clean Series. It has a zinc-alloy housing for a high level of corrosion resistance and it is capable of accepting end covers to increase contamination resistance.

Duty: Light

**8 Corrosion Resistant Series 2-Bolt Flange Units**UCSFL-H1S6  
UCSFL-EH1S6

USFL-S6

UCVFL-S6  
UCVFL-ES7

**UCSFL** is a two-bolt flange unit that is made entirely out of stainless steel components for the highest level of corrosion resistance for a mounted bearing unit. It is also pre-filled with food grade grease for food processing applications.

Duty: Standard

**USFL-S6** is a light duty stainless two-bolt flange unit that is part of the Clean Series. It has a stainless housing for a high level of corrosion resistance and it is capable of accepting end covers to increase contamination resistance.

Duty: Light

**UCVFL** is a two-bolt flange unit with a corrosion resistant thermoplastic housing and the option of either a stainless steel bearing insert or a zinc chromate plated bearing insert. Both bearing inserts offer a high level of corrosion resistance and they are factory lubricated with food grade grease.

Duty: Standard

**7 SU inserts (Small size)****SU****SU-S6**

with set screws

**SU0**...Standard type

Duty: Light

**SU0-S6**...Stainless steel

This deep groove ball bearing insert is intended for very light loads and is used in light duty conveying applications as part of our Clean Series. This bearing has a spherical O.D. and comes pre-lubricated from the factory. These inserts have a spherical O.D. with a wider inner ring and have no grease groove or grease holes for re-lubrication. Two setscrews at 120 degrees apart affix this insert to the shafting. The SU-S6 bearing is constructed of stainless steel material and is used as part of our stainless Clean Series. The stainless material is superior in corrosion resistance compared to the normal clean series insert.

**8 ER inserts****ER****ERC**

with set screws, cylindrical O.D. lubricating mechanism, locating snap ring and snap ring groove

**ER2, ERC2**

Duty: Standard

This deep groove ball bearing insert with a rubber seal and metal slinger come pre-lubricated with FYH grease. The ER series has a cylindrical O.D. with grease groove and grease holes outer ring for re-lubrication. The ER series uses two FYH Bullet Point type setscrews at 120 degrees apart to affix it to the shafting. The ER bearings have a snap ring on the outer ring to help make locating the bearing a simple task during installation.

ERC with NU-LOC concentric locking collar style is also available.

**9 RB inserts****RB**

with set screws, cylindrical O.D.

**RB2**

Duty: Standard

This deep groove ball bearing insert with a rubber seal and metal slinger come pre-lubricated with FYH grease. The RB series has a cylindrical O.D. and has the same dimensions as the ER series but does not have a snap ring for locating or a grease groove and grease holes for re-lubrication. The RB series uses two FYH Bullet Point type setscrews at 120 degrees apart to affix it to the shafting.

### 6 Allowable Rotating Speed

#### 6.1 Allowable Rotating Speed

The rotational speed of a bearing is limited by the temperature increase, mainly due to friction. When the bearing reaches the speed limits shown below, it will seize if operated continuously at these levels.

The limiting rotational speed is the maximum speed at which the bearing can be safely operated continuously.

These allowable rotational speeds of a ball bearing unit are dependent upon the dimensions of the bearing, type of seal, and the fit of the bearing inner ring to the shaft.

**Table 6.1** shows the standard allowable rotating speeds of ball bearing units.

**Table 6.1 Allowable rotating speed of ball bearing units (standard value)**

Remarks 1. Allowable rotating speed of the units with covers is 80% of the value shown in the table above.

2. If a bearing unit is used with an excessively loose fit, allowable rotating speed must be corrected by multiplying it by the fitting factor  $f_c$  shown in **Table 6.2**.

3. The basic bearing size number consists of the duty code (2, X, or 3) followed by the inner ring size code (07, 10, 24, etc.)

### 8.3 Strength of Stamped Steel Housings

The precisely formed stamped steel housing is very rigid, but it is not as strong as cast iron or cast steel housings. Therefore, it will not support loads to the maximum rating of the bearing itself and must be down-rated per **Table 8.3**.

**Table 8.3 Allowable load of steel plate housings (recommended)**

Load direction	Allowable load of stamped steel housings
Radial	Approx. 1/6 of basic dynamic radial load rating of bearing ( $C_r$ )
Axial	Approx. 1/18 of basic dynamic radial load rating of bearing ( $C_r$ )

### 8.4 Strength of Stainless Steel Housings

FYH supplies stainless steel housings (SP-H1, SPA-H1, SF-H1, SFL-H1, ST-H1, SP, SFL).

**Table 8.4** shows the safety factors for stainless steel products. As for the basic values of the static rupture strength of SP-H1, SPA-H1, SF-H1, SFL-H1, ST-H1, SFC-H1 type housings, apply P200 of **Fig. 8.1**, PA200 of **Fig. 8.3**, F200 of **Fig. 8.5**, FL200 of **Fig. 8.6** and T200 of **Fig. 8.7**. As for the basic values of the static rupture strength of SFC-H1 housings, apply F200 of **Fig. 8.5**. For the basic values of the static rupture strength of the SP and SFL type housings, see P000~P006 of **Fig. 8.12** and FL000~FL006 of **Fig. 8.13** and multiply them by 1.5 respectively.

### 8.5 Strength of Die-cast Housings

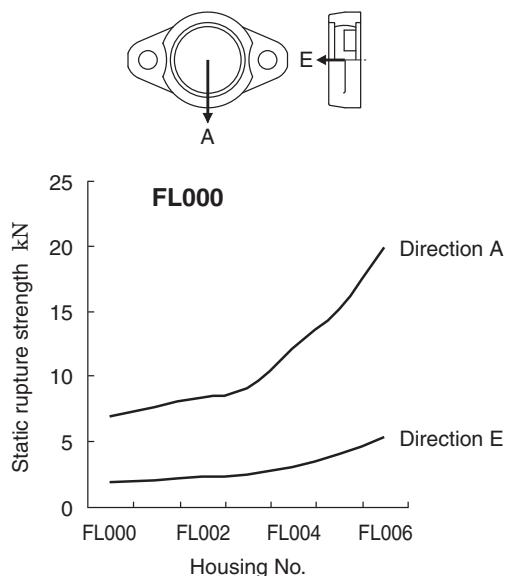

The clean series housing is made of die-cast zinc alloy, but the zinc alloy material is not as strong as cast iron or cast steel. **Table 8.5** shows safety factors for die-cast zinc alloy, and **Fig. 8.12** and **8.13** show the basic values of the static rupture strength of the die-cast zinc alloy housing.

## 11 Accuracy and Internal Clearance

Accuracy of a ball bearing unit is specified in JIS B 1558 (ball bearings for ball bearing units) and JIS B 1559 (housings for ball bearing units). FYH produces products conforming to these standards.

### 11.1 Accuracy of Bearings

**Table 11.1 to Table 11.4** shows the accuracy of a ball bearings for ball bearing units.

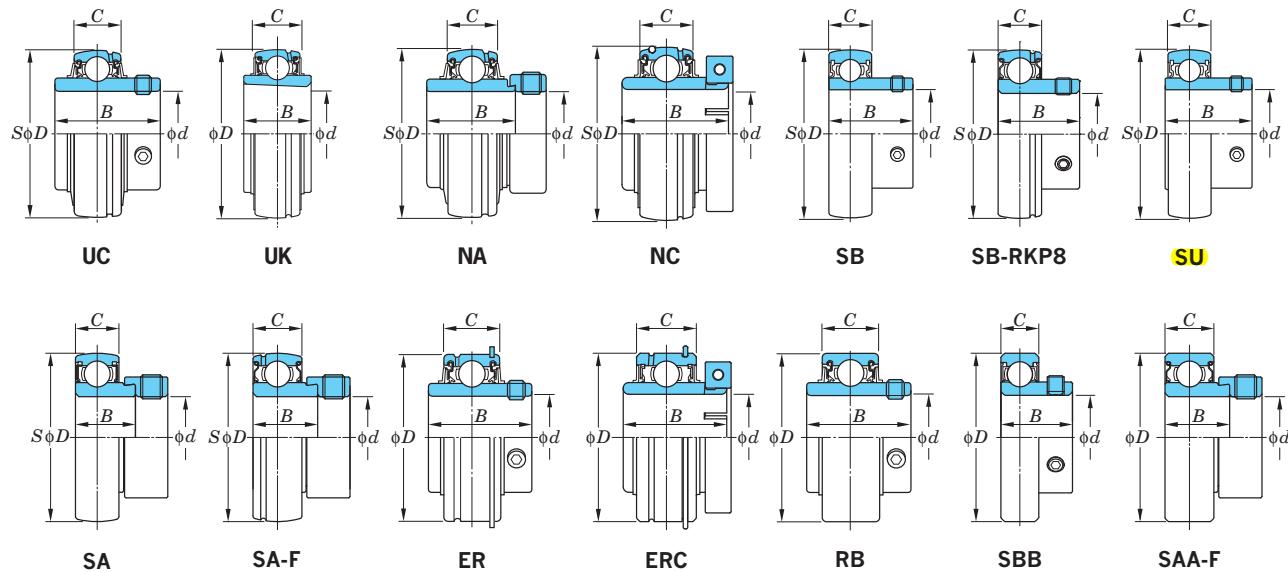

Ball bearings for blowers (special code: S3, S5) are produced with greater accuracy than standard models (see **Table 11.3**).

**Table 11.5** shows the tolerance limitations of inner rings for cylindrical bore bearings.

**Table 11.2 Tolerances and tolerance values of outer rings of ball bearings inserts**

**Table 11.5 Tolerance limitations for radius dimensions for the inner ring of cylindrical bore bearings**

The diagram illustrates the geometry of a cylindrical bore bearing. It shows the inner ring side, the bearing bore diameter surface, and the virtual arc of radius  $r$  (minimum). Two dimensions are indicated:  $(A)$  representing the radial direction and  $(B)$  representing the axial direction. The tolerance values are summarized in the following table.

$r$ (Min.)	$r$ (Max.)	
	Radial direction	Axial direction
0.6	1	2
1	1.5	3
1.1	2	3.5
1.5	2.3	4
2	3	4.5
2.1	4	6.5
2.5	3.8	6
3	5	8
4	6.5	9

**Remark** Though accurate profile of chamfered surface is not specified, the profile on the axial plane should not exceed the virtual arc of radius  $r$  (minimum) that contacts with the side of inner ring and the bearing bore diameter surface.

## 11.2 Accuracy of Housings

This section details the tolerance specifications of the inner diameter of the spherical bore of FYH housings. These values determine how tight or how loose the bearing fits inside the housing.

**Table 11.6** shows the tolerance of the diameter of the spherical bore of housings.

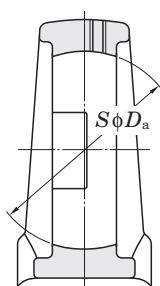

Standard tolerance for mounted units, between the outer diameter of the bearing and the inner diameter of the housing, is a class J7 intermediate fit.

A class H7 tolerance allows greater clearance for applications where minor shaft alignment constantly occurs or in environments where higher temperatures can cause thermal expansion. An anti-rotation pin on the outer ring of the bearing is supplied with these units to prevent the outer ring of the bearing from spinning inside the housing.

A class K7 tolerance allows less clearance and is recommended to prevent the outer ring of the bearing from rotating inside the housing.

**Fig. 11.1** shows examples of housing dimensions relative to installation position with tolerance values.

**Table 11.6 Allowance of spherical bore diameter of housings**

Nominal dia. of spherical bore $D_a$ (mm)		Tolerance class H7		Tolerance class J7		Tolerance class K7

**Remark** FYH selects J, H, or K depending on the applications.

### 11.3 Internal Bearing Clearance

Internal bearing clearance is defined as the allowable space between the bearing balls and the raceways. The degree of internal clearance, referred to as "operation clearance", greatly influences operational life of the bearing as well as characteristics of heat, noise, and vibration.

If the clearance is exceptionally tight between the shaft and the inner ring of the bearing then expansion of the inner ring must be taken into consideration and the correct ball clearance should be selected. Transmission heat from the shaft is also a factor to consider when determining the correct amount of ball clearance (see "**7 Operating temperature and bearing specifications**").

**Table 11.8** shows the internal clearance applicable to specific operating conditions and **Table 11.9** shows the available options for internal clearance.

**Table 11.8 Internal clearance applicable to specific operating conditions**

Type	Applicable internal clearance	
	Bearing with cylindrical bore	Bearing with tapered bore
Standard type	CN	C3
NC	CN	-
Stainless steel type	C3	-

Cold resistant type (suffix code: D2K2)	CN	C3
High speed type (suffix code: K3)	CN	C3
For blower (suffix code: S3)	CN	C3
For high speed blower (suffix code: S5)	C2	C3

Remark For bearings with suffix codes, as those indicated above, the clearance is implied and not indicated in the part number.

Remarks 1. Radial internal clearance in this table conforms to JIS B 1558 (ball bearing inserts).

2. Increase in radial internal clearance generated by measured load conforms to the table below.

Smaller correction of C2 clearance is applicable to the minimum clearance, while larger correction is applicable to the maximum clearance.

## 12 Materials

### 12.1 Bearing Material

Ball bearing inserts are comprised of inner and outer rings, balls, and steel ball cages all of which are made from the highest quality of bearing steel.

These bearings possess the following features.

- (1) High elastic limit to resist strong opposing force
- (2) High rolling fatigue strength to allow for heavy loads
- (3) Superior hardness
- (4) Superior wear resistance
- (5) Superior toughness against impact and shock loads
- (6) Superior precision of dimensional tolerances

High carbon chrome bearing steel is utilized for the bearing components as specified in JIS (Japanese Industrial Standards).

To increase reliability and reduce contamination within the material, a vacuum degassing process is executed to reduce non-metallic elements and any oxygen in the steel.

After the bearing is assembled it is heat tempered and quenched until the hardness reaches 60HRC.

**Table 12.1** shows the chemical components of high carbon chrome bearing steel. Stainless steel bearing inserts (suffix: S6) utilize superior corrosion resistant JIS certified stainless steel.

Riveted steel ball cages are made of JIS certified cold rolled steel which is shown in **Table 12.2**.

### 12.2 Housing Material

FYH housings are made primarily of gray cast iron, and stamped steel. Gray cast iron is the most popular choice for mounted units because of its optimal characteristics of vibration absorption, high strength, and excellent heat dissipation.

**Table 12.3** shows the mechanical properties of gray cast iron (FC200).

Nodular graphite cast iron, or ductile iron, (FCD450-10 of JIS G 5502) provides a good combination of rigidity and fracture resistance, and it is suitable where heavy vibration or impact forces are present.

Housings for units within the Clean Series are available in die-cast zinc alloy as well as stainless steel. Housing material for stamped steel units consists of thick gauge cold rolled sheet steel and steel strip.

**Table 12.4** to **12.8** show the mechanical properties of these housing materials.
